ORGANON LEADING IN GYNAECOLOGY

FERTILITY CONTROL
Marvelon with desogestrel, the first progestogen of the new generation. Multiload, a range of intrauterine devices, allowing selective IUD-prescription based on the needs of the individual IUD-user.

MENOPAUSE
Ovestin, the unique oestrogen preparation with a broad field of indications, e.g. treatment of urogenital complaints.

INFERTILITY
Humegon with a long-standing reputation in the treatment of infertility receives renewed interest as a major tool in IVF-pro grammes. Stimovul: the gentle way of treating ovulation disorders.

If nature can't deliver...

With Serono's help you can

As many as 1 in 6 couples need help in having that much longed for child. As time passes, the chances of pregnancy diminish causing stress and further pressure on the relationship.

Today, the products of Serono research offer nature a helping hand. With your involvement and early appropriate treatment, many previously infertile couples can now be successfully treated.

Serono Products are:
- Metrodin (Urofolitrophin Injection)
- Pergonal (Menotrophin Injection B.P.)
- Profasi (Human Chorionic Gonadotrophin Injection B.P.)
- Serophene (Clomiphene Tablets B.P.)

For further details please contact:
Serono Laboratories (U.K.) Ltd.,
2 Tewin Court, Welwyn Garden City, Herts AL7 1AU. Tel: (0707) 331972

Nucleic acid hybridisation
a practical approach
Edited by B D Hames and S J Higgins,
University of Leeds

AN INVALUABLE GUIDE TO ALL ASPECTS OF HYBRIDISATION

Hybridisation techniques have established themselves as invaluable in recombinant DNA technology - genetic engineering - and throughout molecular biology. Nucleic acid hybridisation is unique as a source for the techniques' major applications at both the theoretical and practical levels. It encompasses the theory behind experiments, their rationale and design, and the detailed protocols for researchers and clinicians to identify and analyse specific sequences.

The usefulness of Nucleic acid hybridisation is enhanced by appendices containing essential data on restriction enzymes, nucleic acid size markers, sources of equipment and chemicals and a computer program for the analysis of hybridisation data.

Contents
Introduction E M Southern • Hybridisation strategy R J Britten and E H Davidson • Preparation of nucleic acid probes J E Arrand • Quantitative analysis of solution hybridisation B D Young and M L M Anderson • Quantitative filter hybridisation M L M Anderson and B D Young • Hybridisation in the analysis of recombinant DNA P J Mason and J G Williams • Hybridisation in the analysis of RNA J G Williams and P J Mason • Electron microscopic visualisation of nucleic acid hybrids P Oudet and C Schatz • In situ hybridisation M L Pardue • Appendices • Index

SUBSCRIPTIONS

A subscription to Human Reproduction comprises 8 issues, with an Annual Author and Subject Index. Subscriptions are entered on a calendar year basis only.

Annual subscription rates (Volume 1, 1986). All subscription rates include handling and delivery, by air beyond Europe.

*Personal subscriptions. Individuals with access to copies of the journal subscribed locally at the full rate may subscribe at the reduced rate above. They must, however, supply the name and address of the full rate subscriber and they must declare in writing that copies of the journal are for their personal use only.

*Membership subscriptions. Individuals with current membership of the European Society of Human Reproduction and Embryology may subscribe at the above rate irrespective of whether or not they have access to the journal subscribed locally at the full rate. However, they must declare in writing that copies of the journal are for their personal use only.

Single issues are also available. Contact the publisher for details.

Supplement. A special supplement to the journal is available separately which contains abstracts of papers presented at the first meeting, in Bonn, of ESHRE in June 1985. This is included free in subscriptions ordered before 30 June 1986. Thereafter it is available at US $17.00/£11.00/Yen 5100.

Orders. Orders and payments from, or on behalf of, subscribers in the various geographical areas shown below should be sent to IRL Press Ltd or their nearest agent with payment made in the currency indicated.

The Americas. Payment in US dollars to IRL Press Inc., PO Box Q, McLean, VA 22101, USA.
Japan. Payment in Yen to sole agents, USACO Corporation, Tsusumi Building, 13–12 Shimbashi 1-chome, Minato-ku, Tokyo 105, Japan.
India. Payment in local currency or sterling to sole agents, Universal Subscription Agency Pvt. Ltd, 101–102 Comm. Centre, PB No. 8, Malviya Nagar Ext, Saket, New Delhi-110 017, India.
Rest of the World. Payment in sterling to the main office for subscriptions: IRL Press Ltd, PO Box 1, Eynsham, Oxford OX8 1JJ, UK. Telephone: (0865) 882283, Telex: 83147-IRL or via 8950511 ONEONE G electronic mailbox 138 07 001.

Advertising. To advertise in Human Reproduction contact IRL Press Inc. in The Americas, or IRL Press Ltd in the Rest of the World (see addresses above).

Authorization to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by IRL Press Ltd for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of $2.00 per copy is paid directly to CCC, 21 Congress St., Salem, MA 01970, USA. 0268-1161/86 $2.00 + 0. Special requests, such as copying for general distribution, or for advertising or promotional purposes, should be addressed to the Production Editor, Human Reproduction, IRL Press Ltd, PO Box 1, Eynsham, Oxford OX8 1JJ, UK.

Human Reproduction (ISSN 0268-1161) is published eight times a year in 1986 for US $122.00 per year by IRL Press Ltd, PO Box 1, Eynsham, Oxford, UK. Application to mail at second class postage rate is pending at Jamaica, NY 11431, USA.

US Postmaster: send address changes to Human Reproduction, Publications Expediting Inc., 200 Meacham Avenue, Elmont, L1 NY 11003, USA. Airfreight and mailing in the USA by Publications Expediting Inc.

The Kryo 10 from Planer is probably the most advanced programmable freezer in the world.

Microprocessor controlled, Kryo 10 incorporates a top loading chamber, side access panels, integral recorder and has exceptionally wide operating ranges allowing for very fast or slow uniform freezing.

Typical applications include
* Human embryo (I.V.F.)
* Bone marrow for transplantation
* Tissue culture cells
* Platelets as a bank for transfusion into patients
* Spermazoa for animal husbandry
* Embryos for maintenance of genetically pure stock
* Food cultures
